♦ The *Journal of North American Bat Research* is a peer-reviewed and edited journal for science related to all aspects of the biology, ecology, and conservation of bats, Order Chiroptera, and their habitats in North America, from Canada to Panama, and the West Indies (Bahamas, Greater Antilles, and Lesser Antilles). (ISSN 2994-1075 [online]).

♦ The journal features research articles, notes, and research summaries on bats.

♦ It offers article-by-article online publication for prompt distribution to a global audience.

♦ It offers authors the option of publishing large files such as data tables, and audio and video clips as online supplemental files.

♦ Special issues - The *Journal of North American Bat Research* welcomes proposals for special issues that are based on conference proceedings or on a series of invitational articles. Special issue editors can rely on the publisher's years of experiences in efficiently handling most details relating to the publication of special issues.

♦ Indexing - The *Journal of North American Bat Research* is a young journal whose indexing at this time is by way of author entries in Google Scholar and Researchgate. Its indexing coverage is expected to become comparable to that of the Institute's first 3 journals (*Northeastern Naturalist*, *Southeastern Naturalist*, and *Journal of the North Atlantic*). These 3 journals are included in full-text in BioOne.org and JSTOR.org and are indexed in Web of Science (clarivate.com) and EBSCO.com.

♦ The journal's staff is pleased to discuss ideas for manuscripts and to assist during all stages of manuscript preparation. The journal has a page charge to help defray a portion of the costs of publishing manuscripts. Instructions for Authors are available online on the journal's website (<https://www.eaglehill.us/nabr>).

♦ It is co-published with the *Northeastern Naturalist*, *Southeastern Naturalist*, *Caribbean Naturalist*, *Eastern Paleontologist*, and other journals.

♦ It is available online in full-text version on the journal's website (<https://www.eaglehill.us/nabr>). Arrangements for inclusion in other databases are being pursued.

**Cover Photograph:** The spiraling trail of millions of Brazilian free-tailed bats (*Tadarida brasiliensis*) at Bracken Cave after dark is like a living, breathing MC Escher. The bat tornado pulses and modulates its pace as the bats flee into the night. This photograph was captured in July of 2023 under the guidance of Fran Hutchins, Director of Bracken Cave.
