

# Identification of Trees and Woody Plants of the Northern Forest: A Wholistic Approach

2024 EAGLE HILL  
NATURAL HISTORY  
SCIENCE SEMINARS  
ON THE COAST OF  
EASTERN MAINE

**Instructor: Erika Mitchell**

**When: September 8th - 14th, 2024**

In this seminar we will take a wholistic approach to plant identification, integrating information of many types, including habitat, growth form, bark, needles and leaves, fruit, twig arrangement, and buds. We will discuss aspects of dendrology, forest ecology, and plant anatomy as they relate to the identification of woody plants. Classroom discussions will center on natural communities of the Northern Forest and their woody plants, followed by visits to the natural communities. Participants will be encouraged to collect photographic and physical specimens for independent study and identification as well as to document species occurrence on iNaturalist or other community science projects.
